

The Peep Squirrel™ Post Binder Drilling Instructions

These simple instructions will show you how to bind a set of prints with our Peep Squirrel post binder strips and posts/caps.

Tools & Supplies

You will need a pair of post binders (top and backer), plastic posts and caps (or your chicago screws), hollow paper drill bit and adapter, drill, drill base (a piece of plywood or MDF), and rubber mallet.

Procedure

Assemble the set into a neat stack with the binding edge on the drill base. Place the two binder strips into position on the edge of the set. Drill all the way through the sandwich of binder and paper with the drill while holding the set in place with your hand or with a clamp. It is helpful to rub the bit with a wax crayon to lubricate it before drilling.

Insert the posts through the holes and tap in the caps with the mallet.

Immediately after drilling through plastic post binders, drill through a spare stack of paper. This will force out the soft plastic circles before they harden up and jam inside the bit.

Cylix also offers post binders *pre-drilled* for your convenience. **NEW**
